the **complete** stitching  
improvement solution

# VisionStitch

The complete stitching improvement solution

## What is VisionStitch?

- VisionStitch is a complete stitching improvement package for all stitching operations and is designed to improve efficiency and quality.
- The unique real-time monitoring software is easy to use on the factory floor and, combined with SATRA's comprehensive stitching training, will improve all stitching operations.
- VisionStitch is developed and supported by SATRA Technology Centre, with 90 years' knowledge of production efficiency, product performance and stitching training. SATRA is recognised and respected by major international brands.

## What are the benefits of VisionStitch?

- A typical saving of 15% of production time and improvements in quality are gained by understanding the set up of workstations and their ergonomics.
- Machines are set up correctly. This can lead to a reduction of up to 33% of the time taken to reach full production efficiency when introducing new products.
- Operatives stitch with greater ease and consistency and with fewer reworks.
- New operatives are trained rapidly and effectively.
- Improvements are immediate.

*The successful implementation of VisionStitch at two of our Asian factories has clearly demonstrated the benefits of the system. We have seen cycle time reduction, defect and rework reduction, improved efficiency and operator satisfaction.*

*Carlos Ruiz, Nike*

## What does the VisionStitch software provide?

- Monitoring of stitching in real time. It gives instant visual feedback of speeds and times graphically showing exactly how the operative is controlling the machine.
- It allows different ways of stitching to be explored immediately and compared to find the best machine set up and the best method.
- Accurate times are captured which can be used by your production team to improve workflow and line balancing.
- Methods and machine set ups can be instantly recalled and rapidly reimplemented as products are reintroduced.
- VisionStitch is a very powerful visual training aid and includes stitching exercises showing SATRA's methods to achieve target times. Trainees improve rapidly by comparing their own attempts with SATRA's methods.
- The visual nature of VisionStitch allows SATRA's experts to provide continued assistance remotely from anywhere in the world.

## What else is included?

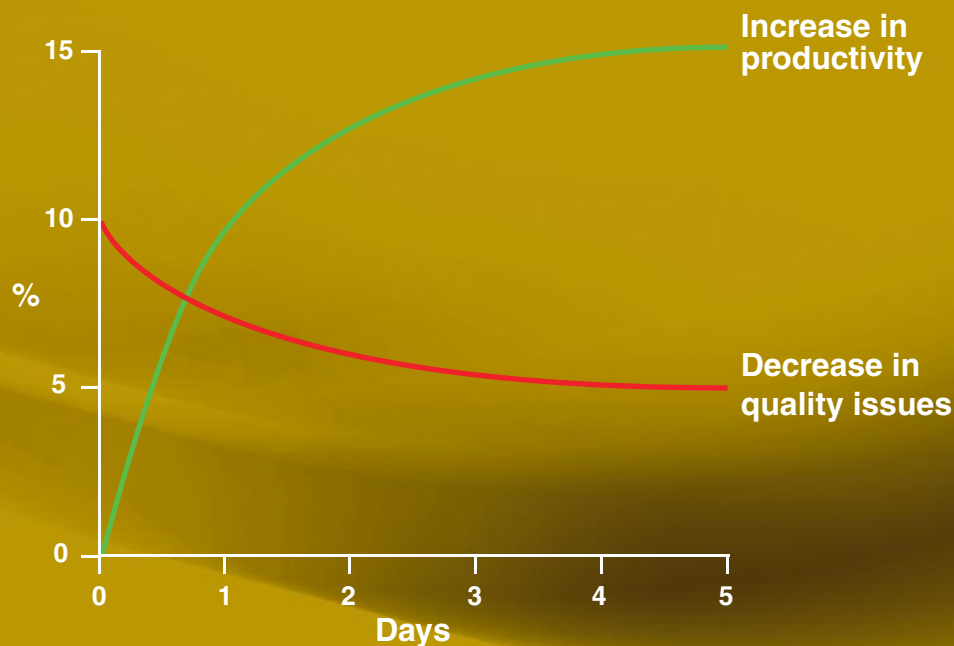

- We help you create a Stitching Improvement Team for your factory. With our training they discover how to adjust many different factors to improve productivity and quality.
- We teach your stitching instructors how to run a structured training course with correct machine set ups, standards and methods gained from VisionStitch - we will train you to become trainers.

*Implementing VisionStitch has helped us improve quality, skills and productivity while reducing cycle time. The ergonomic adjustments have received a very positive response from our employees who are now more comfortable at their workstations.*

*Masyita Hatumena, KMK, Indonesia.*

# Improve productivity and quality with VisionStitch

*Typical figures per workstation.*

VisionStitch combines SATRA's stitching expertise and unique software in a package that starts improving productivity, quality and training from day one.
